3. (Motivate) Two triangles are congruent if the three sides of one triangle are equal to three sides of the other triangle (SSS Congruence).
 4. (Motivate) Two right triangles are congruent if the hypotenuse and a side of one triangle are equal (respectively) to the hypotenuse and a side of the other triangle. (RHS Congruence)
 5. (Prove) The angles opposite to equal sides of a triangle are equal.
 6. (Motivate) The sides opposite to equal angles of a triangle are equal.
 7. (Motivate) Triangle Inequalities and relation between 'angle and facing side' inequalities in triangles.

4. QUADRILATERALS

(10) Periods

1. (Prove) The diagonal divides a parallelogram into two congruent triangles.
 2. (Motivate) In a parallelogram opposite sides are equal, and conversely.
 3. (Motivate) In a parallelogram opposite angles are equal, and conversely.
 4. (Motivate) A quadrilateral is a parallelogram if a pair of its opposite sides is parallel and equal.
 5. (Motivate) In a parallelogram, the diagonals bisect each other and conversely.
 6. (Motivate) In a triangle, the line segment joining the mid points of any two sides is parallel to the third side and in half of it and (motivate) its converse.

5. AREA

(7) Periods

Review concept of area, recall area of a rectangle.

1. (Prove) Parallelograms on the same base and between the same parallels have equal area.
 2. (Motivate) Triangles on the same base (or equal bases) and between the same parallels are

卷之三

CIRCLES (15) Periods

- diameter, chord, arc, secant, sector, segment, subtended angle.

 1. (Prove) Equal chords of a circle subtend equal angles at the center and (motivate) its converse.
 2. (Motivate) The perpendicular from the center of a circle to a chord bisects the chord and conversely, the line drawn through the center of a circle to bisect a chord is perpendicular to the chord.
 3. (Motivate) There is one and only one circle passing through three given non-collinear points.
 4. (Motivate) Equal chords of a circle (or of congruent circles) are equidistant from the center (or their respective centers) and conversely.
 5. (Prove) The angle subtended by an arc at the center is double the angle subtended by it at any point on the remaining part of the circle.
 6. (Motivate) Angles in the same segment of a circle are equal.
 7. (Motivate) If a line segment joining two points subtends equal angle at two other points lying on the same side of the line containing the segment, the four points lie on a circle.
 8. (Motivate) The sum of either of the pair of the opposite angles of a cyclic quadrilateral is 180° and its converse.

SSC CGL Synonyms 2017 PDF
